Rigitone Fix Joint Filling Set

Rigips

Rigitone Perforated Boards

Rigitone is a synonym for a wide range of high-quality perforated boards with acoustic absorption characteristics made from the environmentally compatible material gypsum.

The continuous perforation and installation without joints make Rigitone Perforated Boards real eye-catchers, giving a room a unique character whilst providing optimum acoustics.

However, this requires very careful installation. The jointing of the perforated boards is of utmost importance. Only correctly filled joints ensure the desired visual impact and a result still pleasing to the eye after many years.

That's why we have developed the **Rigitone Fix Joint Filling Set** offering you more safety, speed and ease of use when installing Rigitone Perforated Boards.

Tried and tested joint filling technique

The joint filling technique is a tried and tested method for installing Rigitone Perforated Boards.

The Rigitone Perforated Boards are mounted very close to each other and the joints are filled with joint filler. When correctly filled, the joint will offer very high resistance after the filler has hardened.

In practice, problems can occur if the joints have not been completely filled and cracks in the joint area can emerge. Such damage quickly becomes apparent and the subsequent repair is time-consuming and costly.

For optimum results: the Rigitone Fix Joint Filling Set

In consultation with professional craftsmen, we have revolutionised the joint filling technique and created the Rigitone Fix Joint Filling Set which offers numerous benefits...

... during installation:

- easy and convenient to use thanks to the innovative and ergonomic tool
- up to 30% time saving when filling the joints of the Rigitone Perforated Boards

... the result:

- maximum joint durability for a long-lasting result
- optimum joint filling without any visible joints between the boards creating a perfect visual effect

Rigitone Fix nozzle

Innovative, patented joint filler nozzle specifically developed for filling the joints of Rigitone Perforated Boards. Thanks to the special design, the joints are completely filled – and even slightly overfilled – in preparation for the next step with a Rigitone Fix scraper.

Guaranteeing successful and easy mounting of Rigitone Perforated Boards using the joint filling technique, the Rigitone Fix Joint Filling Set comprises:

- 1** Rigitone Fix gun
- 2** Rigitone Fix cartridge tube
- 3** Rigitone Fix nozzle
- 4** Rigitone Fix cap
- 5** Rigitone Fix piston
- 6** Rigitone Fix scraper
- 7** Rigits screw head template

Using the Rigitone Fix Joint Filling Set

How to prepare the Rigitone Fix Joint Filling Set

Mix the VARIO joint filler according to the instructions on the packaging. To fill Rigitone Perforated Board joints we recommend using a slightly higher water content (2.8 litres of water to 5 kg VARIO joint filler).

Insert the Rigitone Fix piston into the Rigitone Fix cartridge tube and quickly fill the fully prepared VARIO joint filler into the cartridge.

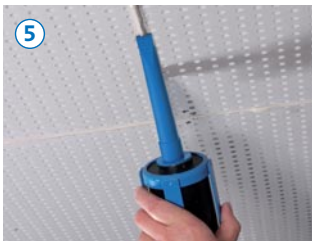

Place the Rigitone Fix cap and the Rigitone Fix nozzle on to the cartridge and insert it into the Rigitone Fix gun.

Pull the trigger until no air is left in the cartridge and the VARIO joint filler will flow easily out of the nozzle.

How to use the Rigitone Fix Joint Filling Set

When using the Rigitone Fix Joint Filling Set, please ensure that all joints are completely filled.

After approx 30 minutes use the Rigitone Fix scraper to carefully remove any protruding joint filler and smooth out the joints.

Slightly overfill the screw heads using the Rigits screw head template.

After approx 3 hours, sand off the joint areas and screw heads and prepare them for painting.

Note: After long breaks we recommend rinsing the tools with clean water!
